

WHAT IS CLAIMED IS:

1. A readable-by-computer recording medium recorded with  
a program read by a computer to manage data generated by a plurality  
of organizations on the basis of communication data transferred  
5 and received between said organizations, which executes:

inputting the communication data sent from a first  
organization to a second organization;

simulating a first intra-organization procedure executed  
in said first organization when sending the communication data;  
10 and

recording first data generated by the first  
intra-organization procedure.

2. A readable-by-computer recording medium recorded with  
15 a program read by a computer to manage data generated by a plurality  
of organizations on the basis of communication data transferred  
and received between said organizations, which executes:

inputting the communication data sent from a first  
organization to a second organization;

20 detecting reply data to the communication data sent to  
said first organization from said second organization;

simulating an intra-organization procedure executed in  
said second organization when sending the communication data;  
and

25 recording data generated by the intra-organization  
procedure.

1005550-13101

3. A readable-by-computer recording medium recorded with a program according to claim 1, wherein said computer further executes:

detecting reply data to the communication data sent to  
5 said first organization from said second organization;

simulating a second intra-organization procedure  
executed in said second organization when sending the  
communication data; and

recording second data generated by the second  
10 intra-organization procedure.

4. A readable-by-computer recording medium recorded with a program according to claim 3, wherein said computer further executes comparing the first data with the second data, and  
15 detects difference data between the organizations.

5. A readable-by-computer recording medium recorded with a program according to claim 3, wherein said computer further executes coupling the first data and the second data together,  
20 and tracks the procedures executed between the organizations.

6. An organization activity management method of managing data generated by a plurality of organizations on the basis of communication data transferred and received between said  
25 organizations, said method comprising:

inputting the communication data sent from a first organization to a second organization;

simulating a first intra-organization procedure executed  
in said first organization when sending the communication data;  
and

recording first data generated by the first  
5 intra-organization procedure.

7. An organization activity management method of managing  
data generated by a plurality of organizations on the basis of  
communication data transferred and received between said  
10 organizations, said method comprising:

inputting the communication data sent from a first  
organization to a second organization;

detecting reply data to the communication data sent to  
said first organization from said second organization;

15 simulating an intra-organization procedure executed in  
said second organization when sending the communication data;  
and

recording data generated by the intra-organization  
procedure.

20

8. An organization activity management method according  
to claim 6, further comprising:

detecting reply data to the communication data sent to  
said first organization from said second organization;

25 simulating a second intra-organization procedure  
executed in said second organization when sending the  
communication data; and

recording second data generated by the second  
intra-organization procedure.

9. An organization activity management method according  
5 to claim 8, further comprising comparing the first data with  
the second data,

wherein difference data between the organizations are  
detected.

10 10. An organization activity management method according  
to claim 8, further comprising coupling the first data and the  
second data together,

wherein the procedures executed between the organizations  
are tracked.

15 11. An information processing system managing data  
generated by a plurality of organizations on the basis of  
communication data transferred and received between said  
organizations, said system comprising:

20 a module inputting the communication data sent from a first  
organization to a second organization;

a module simulating a first intra-organization procedure  
executed in said first organization when sending the  
communication data; and

25 a module recording first data generated by the first  
intra-organization procedure.

FOR SET 0955007

12. An information processing system managing data generated by a plurality of organizations on the basis of communication data transferred and received between said organizations, said system comprising:

5           a module inputting the communication data sent from a first organization to a second organization;

          a module detecting reply data to the communication data sent to said first organization from said second organization;

10           a module simulating an intra-organization procedure executed in said second organization when sending the communication data; and

          a module recording data generated by the intra-organization procedure.

15           13. An information processing system according to claim 11, further comprising:

          a module detecting reply data to the communication data sent to said first organization from said second organization;

20           a module simulating a second intra-organization procedure executed in said second organization when sending the communication data; and

          a module recording second data generated by the second intra-organization procedure.

25           14. An information processing system according to claim 13, further comprising a module comparing the first data with the second data,

10015660-124701  
FBI/DOJ

wherein difference data between the organizations are detected.

15. An information processing system according to claim  
5 13, further comprising a module coupling the first data and the second data together,

wherein the procedures executed between the organizations are tracked.
